

Country-aware LODO meta-analysis of CRC gut microbiome cohorts

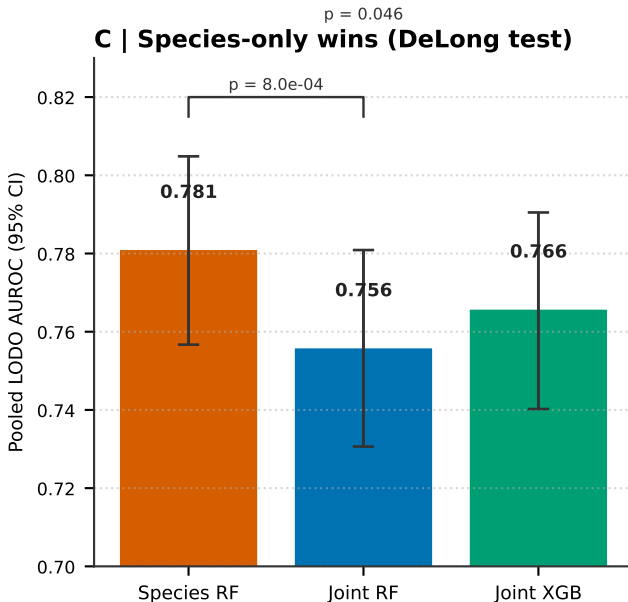

A | 10 cohorts, 1522 samples, 3 continents

B | Country-aware LODO pipeline

C | Species-only wins (DeLong test)

D | Oral pathobionts mark the transition

H -> A (early)	A -> CRC (transition)
LODO AUC = 0.56	LODO AUC = 0.67
<i>F. nucleatum</i> not in top features	<i>F. nucleatum</i> top SHAP (#4)
<i>P. stomatis</i> not in top features	<i>P. stomatis</i> top SHAP (#1)
<i>P. micra</i> not in top features	<i>P. micra</i> top SHAP (#2)
<i>G. morbillorum</i> not in top features	<i>G. morbillorum</i> top SHAP (#3)

Four oral pathobionts drive the adenoma -> CRC transition, but are absent from the early (healthy -> adenoma) signal.
